## DETAILED ACTION

### *Drawings*

1. Figures 1A-C should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### *Claim Objections*

2. Claims 1, 7, 11 are objected to because of the following informalities
- In claim 1, line 8, "said individual layers" should be change to – an individual layer of said magnetic layers --;
  - Method claims 7, 11 should be in independent form. Appropriate correction is required.

### *Specification*

3. The disclosure is objected to because of the following informalities:
- This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Art Unit: 2818

**Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or  
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
  - (1) Field of the Invention.
  - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claim 1 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "and further comprising in each case .....magnetic layer" in page 2, lines 10-11 render the claim indefinite. It is unclear how the tunnel dielectric is located between the two magnetic layers with/without contact from the two magnetic layers?

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

5. Claims 1-15, insofar as in compliance with 35 USC § 112, are rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al. (5,953,248).

Regarding to claims 1-15, Chen disclose a magnetoresistive read/write memory array (45) comprising a plurality of multi-value storage cells (10, 46), each cell having two intersecting electric conductors (48, 49) and layer system comprising magnetic layers (12, 15) located at the intersection of the electric conductors, wherein the system layer system is design as a multiplayer system with tow or more magnetic layers, and the magnetic layers having a magnetization

Art Unit: 2818

direction that can be set independently of one another, the magnetization direction an individual layer of the magnetic layers being changed by electric current flowing the electric conductors; wherein the cells are dielectric and tunnel junction structures. *See Figs. 1-10; Cols. 1-6.*

As claims 2-6, Chen further disclose wherein the magnetization direction can be set independently of one another in the individual of the magnetic layers; the electric conductors are designed for high current densities; the magnetic layers are formed from a ferromagnetic material; the intersecting conductor are aligned orthogonally to one another; and the tunnel dielectric has a thickness of 2 to 3 nm. *See Figs. 1-10; Cols. 1-6*

With regard to claims 7-15, they encompass the same scope of invention as to that of claims 1-6 except they draft in method format instead of apparatus format. The claims are therefore rejected for the same reason as set forth above.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Zhu et al (5,768,181) disclose a magnetic device having multiplayer insulating and conductive layers.
